

ORDERING

- Orders should be placed at least 3-4 weeks before the desired delivery date. When determining a desired delivery date, remember to include time for your flooring to acclimate before installation - see the Storage & Acclimation section below for details.
- When determining the amount of flooring to order, remember to add a 5-15% waste factor, depending on the grade of the material you're ordering.
- A 50% deposit is required on all orders. For your convenience we accept all major credit cards. The balance is due in full upon delivery.
- We will store your flooring for up to one week after the agreed completion date at no charge.
- In addition to flooring, we offer matching stair treads, casing and baseboard, and other assorted trim. Ask for details when you place your order!

STORAGE & ACCLIMATION

- Flooring should be allowed to acclimate to the site conditions for a minimum of 10 days before installation. We supply stickers and instructions for proper air circulation around the boards.
- Wood expands and contracts depending on the amount of moisture in the air. It's important to make sure that the acclimation area is as close as possible to living condition so that your floor doesn't get unsightly gaps in a dry winter or buckle during a humid summer.
- All sheetrocking, plastering, and painting should be complete and thoroughly dry before the flooring is brought in to acclimate.
- It's critical that the flooring is stored in the space it will be used. Don't store it in a garage, basement, or other unconditioned space.

THEFLOORINGMILL.COM
INFO@THEFLOORINGMILL.COM

Located in the heart of picturesque Chester, VT, we welcome you to stop by our showroom anytime to see samples of the various products we offer. We'd also be happy to give you a tour of our manufacturing facility and warehouse.

Perched at the crest of the hill between Chester Village and Chester Depot, you will find us on Route 103 (also Depot St.), about a half mile north of where it separates from Route 11.

THE FLOORING MILL

AT

VERMONT HARDWOODS

Southern Yellow Heart Pine

(802) 875-2550
386 Depot Street, Chester, VT 05143

HARDWOOD

Hardwood is more than a name, it's a description of the properties of these woods - that's why they've been used for decades in areas such as gymnasiums. They have stood the test of time, and you will find their wear characteristic superior to many other woods and synthetics. The 3/4" thick random width hardwood planks our flooring is made from provide you with the finest flooring available.

Select Cherry

Ash	Predominant grain, but lighter than Oak
Birch	Mostly light with red heartwood
Butternut	Warm golden brown tones perfect for paneling
Cherry	A rich, warm addition to any room
Hard Maple	One of the hardest woods available; has light sapwood and some brown heartwood
Hickory	Bold light/brown mix with nice texture
Oak, Red	Strong grain and russet color lend a reassuring touch to any room
Oak, White	Actually more brown than white; takes a stain very well
Walnut	Rich brown color; ideal for a den or family room

WIDE PINE

Pine makes a unique and beautiful flooring or paneling. Each board is hand selected and milled with a square edge for traditional face nailing. Tongue and Groove is available upon request.

Eastern White

Warm colors and large knots produce a character unavailable in any other material. One of the most natural materials to put in low traffic rooms where you want a cozy, rustic feel.

Southern Yellow

Strong grain pattern that will complement any warm accented decor. Approximately twice as hard as Eastern White, this wood is better suited for flooring.

Heart

The center (aka heart) of Southern Yellow Pine trees are gold-brown/orange with nice tight knots. Even harder than standard Southern Yellow, it's only about 5% softer than Red Oak.

Eastern White Pine

THERMORY®

Thermo-Treated Wood • Not Engineered • No Chemicals

The Thermory® Dance Collection is solid Ash plank flooring that is not engineered, but heat- and steam-treated in a chemical-free process called thermal modification that makes it ideal for use over radiant heating and the only solid wood with a warranty for gluing directly to concrete.

Thermally-modified wood is more stable than untreated and engineered wood due to changes in its cellular structure. The process also cooks out sugars, making it resistant to rot. Overall, thermo-treated wood is superior to engineered wood.

Two treatment processes yield two lines: Salsa and Tango.

SALSA

The Salsa line undergoes a medium heat treatment, giving it lighter color than the intensely-treated, more stable Tango line. If you're satisfied with the stability of the Salsa line but want a darker floor, you can simply apply a dark finish.

Warranty

Over Radiant Heat: up to 5"
Regular Install: up to 7½"

TANGO

The Tango line undergoes an intense heat treatment, making it more stable and suitable in moisture-prone areas such as bathrooms and wet rooms. If you like the stability of the Tango line but want a lighter floor, you can finish the floor with a white oil.

Warranty

Over Radiant Heat: up to 6"
Regular Install: up to 7½"

GRADES

Country

The right mixture of tight knots, color variation, and other visually interesting characters fit right into rustic settings.

Select

The subtler character of a clear floor but with color variation lends the perfect touch for a more traditional look.

Prime

For the most elegant and formal of rooms, you don't want anything to detract from the rest of the decor. There will be natural color variation, but only the predominant color.

ABOUT US

Vermont Hardwoods was founded in 1979 as an outlet of quality hardwoods for local craftsmen. As demand dictated, value-added services were implemented. We are currently in our fourth location as our growth has generated the need for more space. Our current 30,000 SF facility has fully weathertight storage and a temperature- and humidity-controlled shop with two moulders and all the supporting equipment.

With a large warehouse, modern equipment and people who care about their customers, we guarantee that you will be satisfied with every aspect of your dealings with The Flooring Mill at Vermont Hardwoods.

SUSTAINABILITY

Contrary to popular belief, wood is a sustainable and environmentally friendly resource. Here are a few facts:

- We get all our wood from North American forests, which are regulated and actually increasing in size
- Using wood products reduces greenhouse gas emissions because unharvested wood rots, which releases the carbon dioxide it stored up during its lifetime
- Solid wood floors are long-lasting and can be refinished multiple times, so they rarely need replacing
